

ADAM NGUYEN

Sydney (Open to relocation) ◇ adamnguyxn.au@gmail.com ◇ github.com/adampharrels ◇ [Portfolio Website](#)

EDUCATION

Bachelor of Information Technology, University of Technology Sydney

Feb 2024 – Dec 2026

Major: Software Development, Data Analytics and AI

Activities: Community Director - Vietnamese Students Association of NSW, UTS Law Public Speaking Competition; Susquehanna Algothon 2026

SKILLS

Languages Java, Python, JavaScript/TypeScript

Backend Spring Boot, FastAPI, Hono.js, Express.js, REST APIs

Frontend React, Next.js, Vite, Angular

Database PostgreSQL, MySQL, SQLite, Prisma

Testing & Delivery pytest, JUnit, Jasmine, Git, Docker, Linux/Unix, Azure DevOps, GitLab CI/CD, GitHub Actions

Data & AI SQL, pandas, NumPy, TensorFlow, PyTorch, NLP, vector embeddings

EXPERIENCE

Junior Software Engineer

Jan 2026 – Present

Promoted from Software Engineer Intern

NexStox

- Built and integrated **TypeScript** and **React** features for a cryptocurrency exchange, including candlestick charts, order history, funding, wallet and administrative workflows connected to **REST APIs**.
- Owned end-to-end defect resolution across customer-facing and administrative workflows, from root-cause analysis to testing and production deployment.
- Owned the migration of a high-traffic game from **Next.js** to **Vite**, reducing build time by **~40–60%** and improving local development speed.
- Built admin dashboard tooling that cut publishing time by **~50%**, reducing dependency on frontend engineers.

Data Engineer Intern

Apr 2026 – Jun 2026

StevTech

- Reduced drone imagery preparation time from hours to seconds by building a **Python** data pipeline that processes multi-sensor datasets up to **~50GB** per batch for downstream computer vision weed-detection models.
- Designed an extensible processing architecture with sensor-specific components that standardised timestamps, coordinates, units and field names while allowing new cameras and sensors to be added without changing existing logic.
- Wrote **pytest** tests covering validation, file-processing and sensor-specific workflows, helping prevent regressions as new sensor types were added.
- Presented product demos and technical outcomes to stakeholders, prospective investors, and university academics, translating complex technical concepts into clear insights for non-technical audiences.

Software Engineer Intern - Full-stack

Oct 2025 – Jan 2026

TMA Solutions

- Built a full-stack internal workforce planning system using **Next.js**, **Hono.js**, **SQL**, and **REST APIs**, designing backend data models and API endpoints for skills matrix, resource allocation, and project analytics.
- Refactored an **Angular** candidate-management dashboard into reusable components, reducing duplicated logic by approximately **~40%**, and wrote **Jasmine** tests to validate component behaviour.
- Reduced manual interactions by **~40%** by developing a multilingual voice-enabled chatbot for machine support and improved accuracy to **90%** by implementing semantic similarity search with vector embeddings.

PROJECTS

UniSpace (<https://github.com/adampharrels/ASDproject>)

- Built a full-stack university study-space booking system using **Java**, **Spring Boot**, and **MySQL**.
- Designed layered controllers, services and data-access components for user registration, login, session management, room availability, booking creation and reservation history.
- Implemented scheduling and database validation to prevent conflicting reservations, and wrote **JUnit** tests for booking services and reservation-conflict handling.

StoxLens (<https://github.com/adampharrels/StoxLens>)

- Built a full-stack analytics platform using **Next.js**, **TypeScript**, **FastAPI**, **Python**, and **Docker**
- Developed **Python** analytics APIs using **pandas** and **NumPy** to clean historical price data and support research, comparison, reporting, and watchlist workflows.
